Claims 1-13 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claims 1 and 7 recite that “second oligomer” as both part of the mixture that forms the reticulated network, in which there are pores, and as being within the pores themselves. If the second oligomer is within the pores, this would encompass the pores being completely filled with the electrolyte (oligomer the plus the salt), which would render the overall film non-porous. Thus, the structure of the present polymer electrolyte is unclear. Claims 2-6 and 8-13 depend from claims 1 or 7, and would thus likewise be indefinite. Claims 6 and 12 recite “lithium aluminate (gamma-LiAlO₂)”. Whether these claims are intended to encompass all forms of lithium aluminate, or just the gamma form is unclear.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Choi *et al.* (US 6,949,318) and Cheshire *et al.* (US 5,001,023) disclose polymer electrolytes comprising polyalkylene oxide with carbonate side chains, polyvinylidene, PVdF-hexafluoropropylene copolymer or polyacrylonitrile, but include liquid solvents. Yamamoto *et al.* (US 2005/0196678) discloses polymeric electrolytes in which the polymers include glycol and acrylate groups.

Claims 1-17 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action. The polymer electrolyte, which includes any of the recited polymers, and the oligomer with the halogen-substituted end groups, is not disclosed by the prior art, cited either herein or by applicants.
